

# DORIC LINED CONCRETE BURIAL VAULTS OFFER SECURITY & PROTECTION.

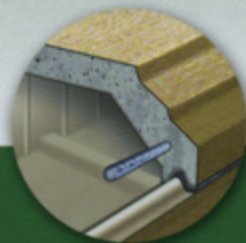

Steel reinforcement, Doric's exclusive Integra-Seal, which joins the cover to the base, and thermoformed liner liner provide added strength for the ultimate in protection.

An unsealed concrete box allows ground water to enter the container through drainage holes in the bottom and around the unsealed cover.

*The backhoe, the preferred choice to open a grave, weighs in excess of ten tons. This weight, the daily grind of cemetery equipment and the constant forces of soil pressure reinforces the need for protection. To combat these forces, Doric manufactures one of the strongest lined concrete burial vaults in the industry today. Doric vaults are lined with our exclusive poly-ribbed liners which contain the contents inside the vault, thus protecting our environment. The cover, where the forces are the greatest, is steel reinforced for added protection to an already premium vault.*

All Doric plants are certified by the National Concrete Burial Vault Association.
